

ANA SOFÍA NANNI

**Instituto de Ecología Regional
Argentina**

I am Sofía Nanni. I just finished my PhD thesis about the consequences of land use change and forests redistribution over a group of ecosystem services (carbon sequestration, watershed protection, food production) and the diversity of birds and medium/large mammals in a subtropical watershed of NW Argentina. Currently I have a Postdoctoral position to continue assessing trade-offs and synergies between agriculture adjustment, ecosystem services provision and biodiversity in the same study area, and my main interest focus on these themes, with the aim of upscaling this research to other regions both regionally and globally.
