

DIEGO PONCE

**University of California Berkeley
Mexico**

Diego Ponce de Leon Barido is a MS/PhD student at the Energy and Resources Group, UC Berkeley, interested in low-carbon economic growth, Micro hydro development, and the efficient use and distribution of water and energy resources in megacities. He has fieldwork experience in Chiapas (Mexico) working on microcredit schemes and river survey studies, has worked developing 'low-tech high impact' water distribution systems for small communities in Uganda and Honduras, has used GIS models and InVest (Integrated Valuation of Environmental services and Tradeoffs) to develop a hydrological model of the Linthipe Basin (Malawi), and most recently was involved in a project linking hydrological variability, agriculture, and energy in the sectorial economies of Punjab and Telangana, in India. He has also worked as an economic, financial, and strategy consultant for Analysis Group in Boston. He holds degrees in Economics and Civil Engineering from Macalester College and the University of Minnesota respectively and has published in a variety of healthcare economics and engineering journals. He is currently a Research Coordinator for the Fulbright NEXUS program for The Americas.
