

Pedro Vianna Gatts
Universidade Federal Fluminense
Brazil

I am on PhD in Land and Ocean Dynamics post graduation program of Universidade Federal Fluminense (UFF). I did my BSc. in Biological Science and MSc. in Ecology and Natural Resources at Universidade Estadual do Norte Fluminense (UENF). My monography was focused on the trophic dynamic of marine catfishes on the north coast of Rio de Janeiro State. My masters dissertation was focused on the community dynamic of marine transient fishes at an artificial reef area. I have expertise in trophic webs, ecosystem and organisms ecology, transient and demersal fishes, natural and artificial reefs. My areas of research interest are stable isotopes analysis (mainly C and N), environmental biogeochemical cycles, ecological and trophic nets and community dynamics.
