**Kenya**

Am Winnie Kimutai, a Kenyan national and am doing my Msc in Agronomy(Plant Nutrition) and the title of my research work is EFFECT OF SELECTED BRADYRHIZOBIA ON GROWTH, BIOLOGICAL NITROGEN FIXATION AND YIELD OF COWPEA IN SOILS FROM KILIFI AND EMBU COUNTIES, KENYA. My main area of interest is curbing use of fertilizers and instead making use of BNF especially in growing legumes like cowpea since fertilizers are expensive in Kenya and they also cause a lot of pollution in water bodies. Am inoculating cowpea with my two selected strains and using reference strains from Brazil that is (BR3262 and BR3267) these two reference strains have really proved competitive than my local strains and therefore with maximum use of them in Kenya, cowpea yields can really increase, and it's a very sustainable way in nutrient cycling.
