

Nidia Mara Marchiori
UNICAMP
Brazil

I am biologist (2009), Master in Plant Biology (2012) and Ph.D. student in Plant Biology (2013 - 2017) at the State University of Campinas (Unicamp – Brazil). I am interested in the plant ecophysiology, especially in the nitrogen use strategies and the relationship with forest succession. My aim is to associate the structure and the functionality of Atlantic forests and develop a new ecophysiological tool to evaluate the forest successional status.
