

BELIZE A. LANE

University of California Davis

USA

Belize is pursuing a Ph.D. in Hydrologic Sciences from the University of California, Davis. Her research interests include sustainable management of basin-level water resources for both humans and the environment, and the interactions between riverine hydrology and ecology. Current work includes using simulation modeling to evaluate the potential to provide environmental flow regimes to regulated rivers through reservoir re-operation. Belize holds a B.S. in Ecology, Behavior and Evolution from the University of California, San Diego. She is also a whitewater rafting guide and has boated on rivers in California, Oregon, Chile, Costa Rica and India.
