

COLIN MCKENZIE
University of Arizona
USA

Colin is a groundwater hydrologist with the Tucson, Arizona and Santiago de Chile-based water resources consulting firm Montgomery & Associates (M&A). He analyzes subsurface water resources. While with M&A, he has spent the majority of his time in the Atacama Desert and Andes Mountains of Chile, from Copiapó to Iquique (with the occasional detour to Perú). In South America, his work has focused on groundwater development and open-pit mine dewatering. Colin is now further pursuing his professional and academic interests, which lie at the intersection of natural resources (including water) policy and economics, development, and governance. Currently, he is working in both the Water Policy & Economics and Litigation Support groups at M&A's home office in Tucson. He also is planning to begin graduate school this year. Prior to joining M&A, Colin worked in the field of international community development, managing projects in Mexico and Central America with the NGO Amigos de las Américas. When the weather is right, he is likely to be found in the sky, flying his paraglider. Colin received a B.S. in Hydrology and Water Resources from the University of Arizona in 2006 and is a fluent Spanish speaker.
