

**HEATHER LEE**

**Texas A&M University**

**USA**

I am a PhD Candidate in the department of Geography at Texas A&M University. I study human-environment interaction with a focus on water governance as it relates to agricultural production, globalization, and global environmental change. I am currently conducting fieldwork for my doctoral dissertation research in Guanajuato, Mexico on the implementation of agricultural water conservation technologies, such as drip irrigation, sprinklers, greenhouses, and high tunnels. More specifically my project examines how private and public actors communicate water scarcity and technological solutions to agricultural water users, why farmers choose (not) to use water conservation technologies, and how water conservation technology use is related to integration in global agricultural markets.
