

**Rebecca Holloman Walker**  
**University of California**  
**USA**

From the United States, Rebecca Walker received her B.S. in Environmental Sciences and Anthropology from the University of Virginia in 2015. Her past research includes an analysis of soil carbon and nitrogen dynamics in old growth forests of the Mid-Atlantic and an interdisciplinary study of how perceptions of nature shape plant community composition and biogeochemical cycling in Israel. Rebecca is currently pursuing her M.S. in ecology at the University of California, Davis on the use of stable isotopes to quantify denitrification fluxes and ultimately hopes to incorporate interdisciplinary methodologies into the study of ecosystem processes.
