

ANNA STEWART
State University of New York
USA

Dr Stewart-Ibarra received her PhD in ecology from the SUNY College of Environmental Science and Forestry and Masters in Public Administration from the Maxwell School of Citizenship and Public Affairs at Syracuse University. As a research scientist and Latin America Research Program Coordinator at SUNY Upstate Medical University (Syracuse, NY), her research focuses on understanding the environmental (e.g., climate) and socio-political drivers of dengue fever transmission. Her current project is focused on strengthening public health research and surveillance capacities in southern coastal Ecuador in collaboration with the National Institute of Meteorology and Hydrology and the Ministry of Health of Ecuador, where she is a visiting researcher.
