

Science and the Policy Process

Sara Hughes

National Center for Atmospheric Research

Governance and Knowledge Integration at the Science-Policy Interface

Quito, Ecuador

April 8-12, 2013

Goals:

1. Introduce the policy process and how institutions shape the use of science
2. Discuss methods for understanding the policy process
3. Present example from Mexico City

Components of the Policymaking Process

Scientific
Information

Scientific
Information

Scientific
Information

Institutions:

The rights, rules and procedures that structure behavior and decision making outcomes.

Young, Oran. 2002. *The Institutional Dimensions of Environmental Change*. Cambridge, MA: MIT Press.

They are what a society or community uses to make collectively binding decisions, implement these decisions, resolve disputes, and punish rule-breakers.

Rothstein, Bo. 1996. "Political Institutions: An Overview" in *A New Handbook of Political Science*. New York, NY: Oxford University Press.

Institutions:

1. Structural features of decision making that transcend individuals
2. (Relatively) stable over time
3. Able to affect behavior
4. Able to create a shared sense of value and meaning

Peters, B. Guy. 1999. *Institutional Theory in Political Science*. New York: Continuum Publishing.

Policy Process, Institutions, and Science

Voting rules in a legislature

Decision making procedures in international negotiations

Public participation processes in city code revisions

- Institutions help determine:
 - What information is collected
 - What information is used
 - What problems are detected
 - Who participates in policy making
 - When policy making happens
 - How and when policies are evaluated

- Institutions help determine:
 - What information is collected
 - What information is used
 - What problems are detected
 - Who participates in policy making
 - When policy making happens
 - How and when policies are evaluated
- No perfect model...but we construct them

Qualitative Tools for Understanding the Policy Process

1. Case Studies

- “Real world” theory testing
- Theory building
- “Clinical” case studies
- Descriptive

Example: Testing theory with cases

What effect does a national research program have on local disaster reduction policies?

National Research Program

2. Focus Groups

- Group of individuals (6-12) engaged in a guided discussion on a topic
- Purposively selected
 - Typically don't represent a random segment of the population

Qualitative Tools for Understanding the Policy Process

Example: Gaining insight into a group's behavior

Where do environmental administrators get their information from and why?

3. Interviews

- Unstructured
- Semi-structured
- Structured

Example: Understanding process and authority

How does a disaster agency make decisions about program priorities?

4. Observation

- People
- Groups
- “Embedded research” and ethnography
- More or less participatory

Example: Understanding a culture

What are the underlying norms and motivations in disaster response in Country A?

5. Document analysis

- Content based analysis
- Coding schemes
- Can often be quantified

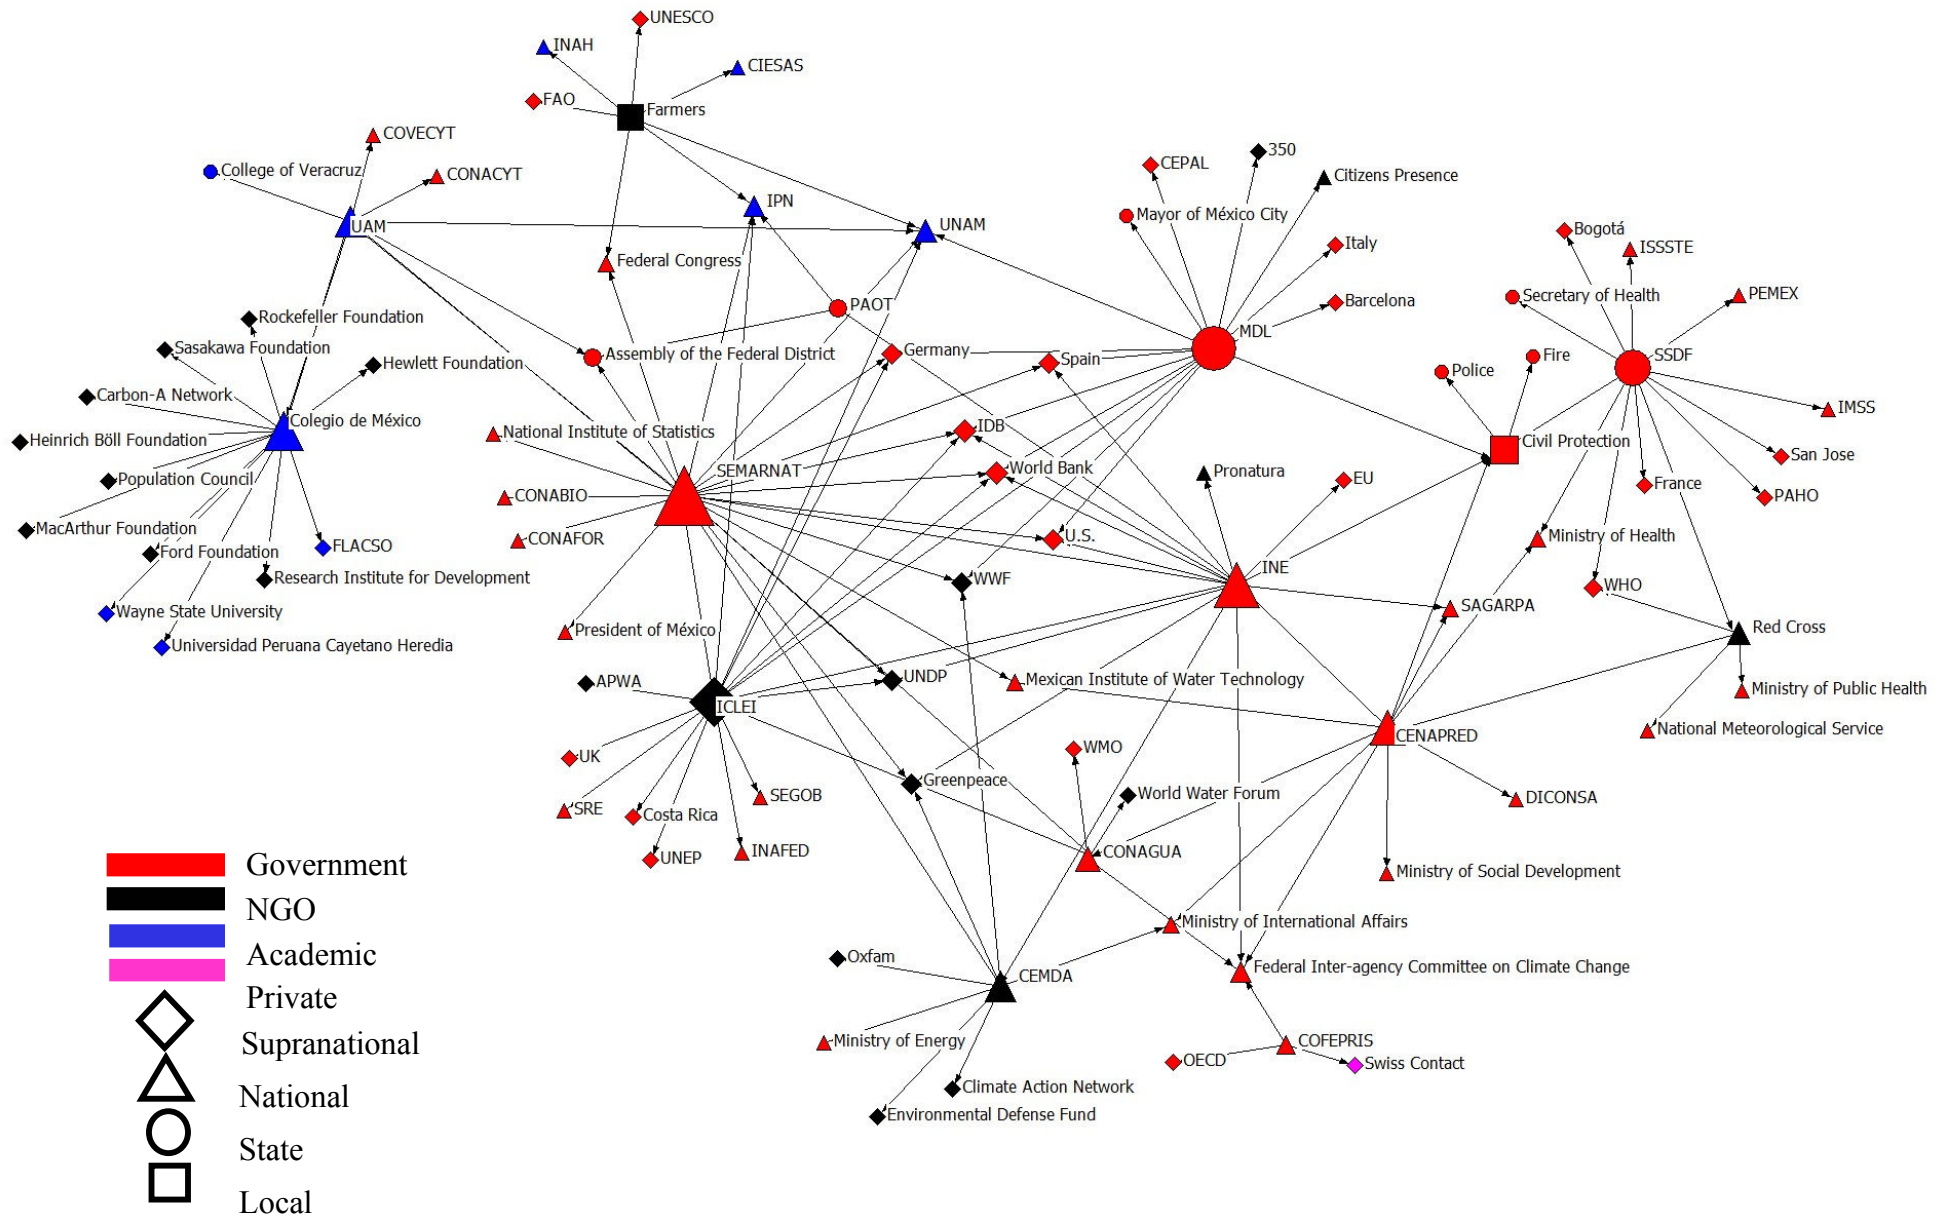

Example: Legal content and treatment of environmental issues

How is scientific uncertainty represented in state-level policies?

6. Network analysis

- Actor relationships
 - Different qualities and characteristics
- Descriptive and/or analytical

Mexico City

Qualitative Tools for Understanding the Policy Process

Traditional Criteria for Judging Quantitative Research	Alternative Criteria for Judging Qualitative Research
internal validity	credibility
external validity	transferability
reliability	dependability
objectivity	confirmability

Qualitative Tools for Understanding the Policy Process

1. Credibility

- Results are credible or believable from the perspective of the participant

2. Transferability

- Degree to which results can be generalized or transferred; responsibility of producer and user

3. Dependability

- Account for changing context of the research and how this affects the research

4. Confirmability

- Degree to which results could be confirmed or corroborated by others
 - Document procedures
 - “Devil’s advocate”
 - Negative instances
 - Data audit

Sampling:

- Purposive
 - Tailored to research needs
- Quota
 - Representatives from important groups
- Snowball
 - Recommendations and contacts

Example from Mexico City

- Interviews with decision makers, planners, NGOs, academics
 - 15 in Mexico City
 - Strategic sampling plus snowball
- Planning and legal documents

Structuring the Science-Policy Interface

Expert Network

Boundary Organization

- Heavy investment in institutionalization
 - To ensure that the plan's success is not contingent on who is in power

Institutionalization

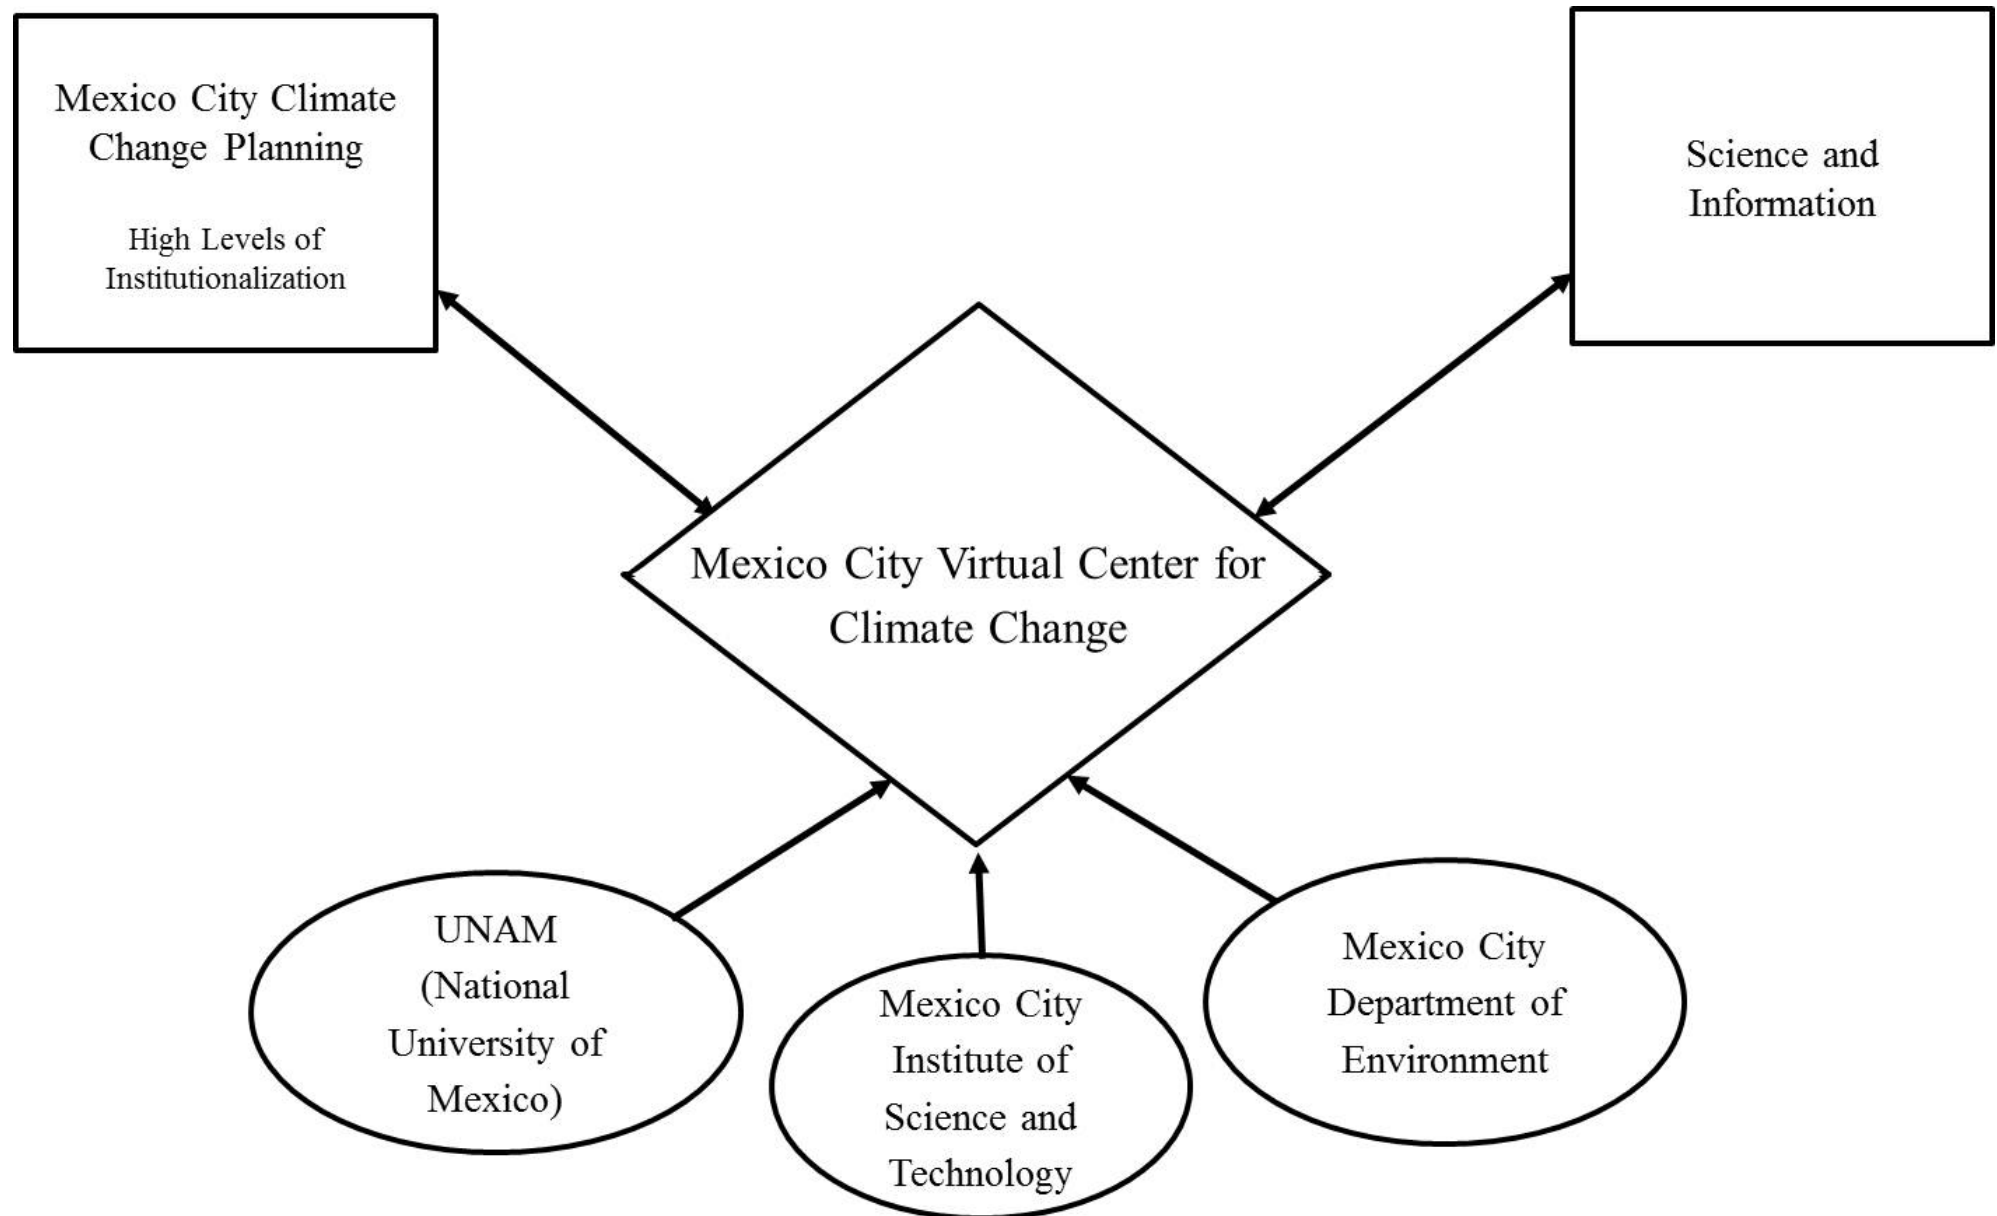

1. Clear and relevant sources of authority
2. Shared sets of practices and codes of conduct
3. Adequate and reliable funding streams
4. Accountability mechanisms

- Heavy investment in institutionalization
 - To ensure that the plan's success is not contingent on who is in power
- Development of the Virtual Center for Climate Change for science-policy interactions

“The most important information we get through the Virtual Center for Climate Change...their work is important because they are experts in the field and the information they provide is very important for developing public policy.”

Mexico City official

Example from Mexico City

Structuring the Science-Policy Interface

**Expert
Network**

**Boundary
Organization**

Insights:

- 1.Science and policy can interact through different channels
- 2.The structure of the science-policy relationship is shaped by the institutionalization of the policy area
- 3.Importantly tradeoffs between the two models

Goals:

- 1.Introduce the policy process and how institutions shape the use of science
- 2.Discuss methods for understanding the policy process
- 3.Present example from Mexico City

A grayscale photograph of a Japanese garden. In the foreground, large, detailed maple leaves are visible, some with water droplets. In the background, a traditional Japanese garden features a pond, a small pagoda, and dense foliage. The text "Thank You" is centered over the image.

Thank You
