

LETÍCIA SANTOS DE LIMA
Universidade Federal de Minas Gerais
Brazil

I am an Environmental Engineer, currently working with research on environmental modelling at Centro de Sensoriamento Remoto at Universidade Federal de Minas Gerais. I am also a substitute teacher at Departamento de Engenharia Hidráulica e Recursos Hídricos at the same university. My work is mainly related to simulations of land use change and its impacts. Most of my teaching activity is related to water basin analysis, urban planning and environmental hydrogeology for civil and environmental engineering students.
