

# RESPUESTA EN CLIMA Y AMBIENTE PARA LA SALUD EN LAS AMÉRICAS

Managing Transdisciplinary Teamwork  
18 de octubre, 2022

Lily House Peters, Gabriela Alonso Yáñez, Marshalee Valentine, Martin Garcia Cartagena

# Learning Objectives

- Identify common pitfalls in transdisciplinary teamwork and strategies for ethically and equitably managing transdisciplinary teams
- Describe how to mitigate common conflicts in transdisciplinary teams
- Explain the importance of including diverse actors in research with an emphasis on equity, diversity, and inclusion (EDI) including gender equity, racial and ethnic diversity, and intergenerational inclusion
- Explain and apply a 'results chain' model to a specific research problem

# Focal Areas:

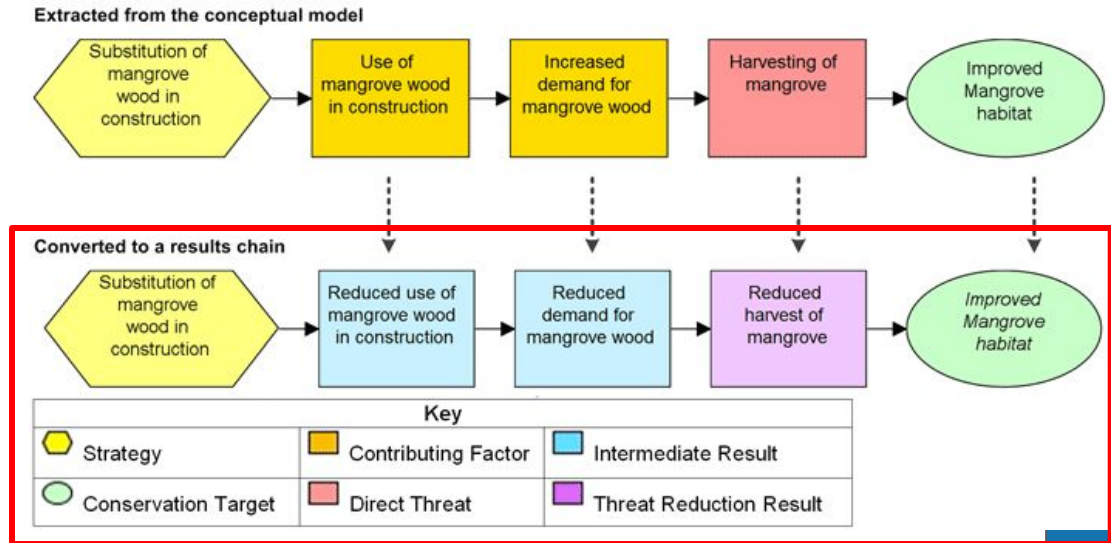

- Best practices for managing conflicts that arise in transdisciplinary teams, including actor equity and social learning to strengthen teamwork
- Politics and ethics of transdisciplinary research in teams composed of diverse scientific disciplines, policy-makers, and stakeholders
- Best practices to implement and pitfalls to avoid in stakeholder engagement processes, including with youth and children, using an EDI-focused lens
- Knowledge mobilization for effective policy-making at the CEH nexus

# An Important Logic Model: Results Chain

- Guides project implementation *and* is essential for monitoring and evaluation of project outcomes
- In general, a “result” is something that happens or exists **because of something else** that has happened
- In research, development and governance, the **results chain** is a more *nuanced* understanding of different types of ‘results’
- The **results chain** distinguishes between five logically connected elements:

- inputs
- activities
- outputs
- outcomes
- impact

# Simple Example: Results Chain

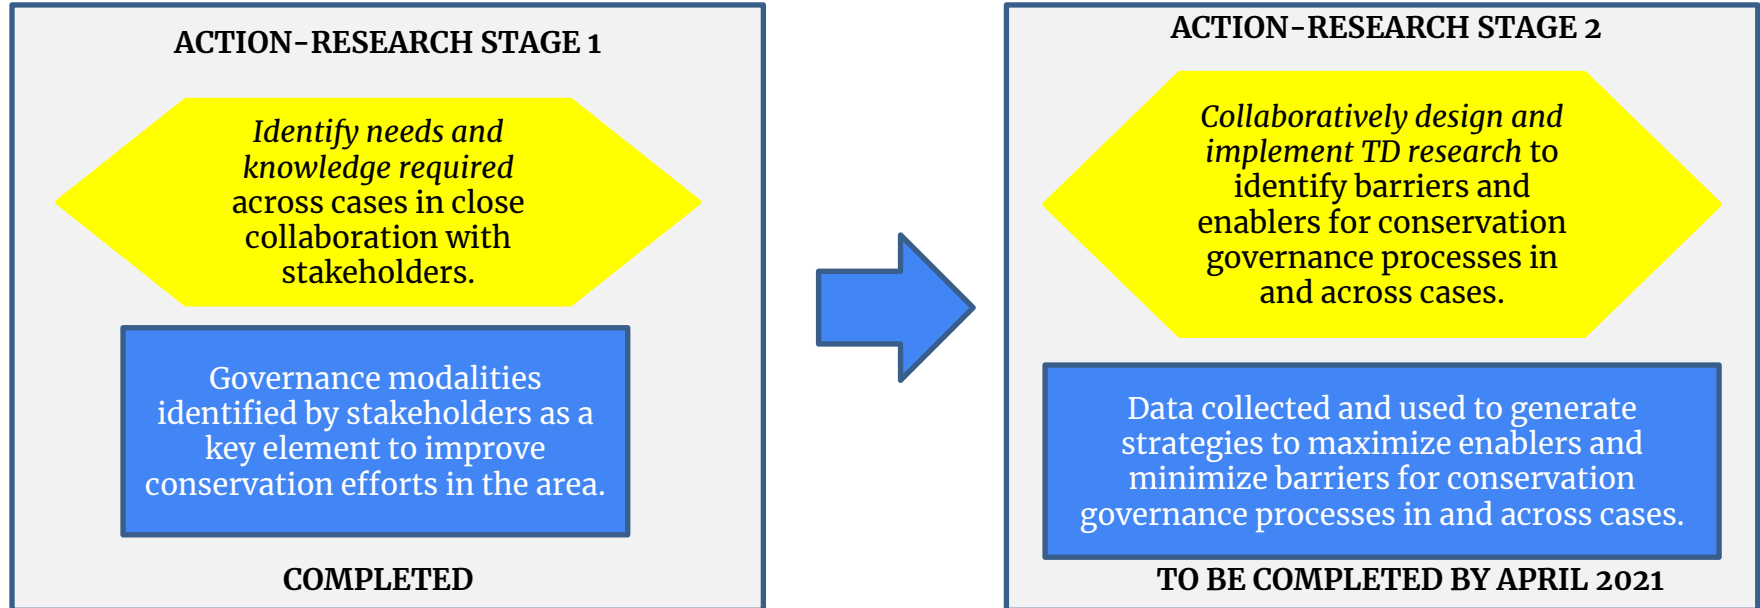

EVERYDAY EXAMPLE: I want to do something about living a **healthier life**. This is the desired **impact**. To do that, I want to reduce my weight. This is my planned **outcome**. To reduce my overall weight, I plan on eating more **vegetables** and **exercise** regularly. These are my planned **outputs**. Eating healthier requires more conscious **shopping** habits. More exercise requires me to go running or join a gym. These are some of my planned **activities**. These activities require some extra **time** and **money**. These are the **inputs**.

# Grounded Example: TD Project Results Chain

- IAI-funded Small Grants Program (SGP) project (2018–2022), “*Incorporating Local and Traditional Knowledge Systems: New Insights for Ecosystem Services and Transdisciplinary Collaborations*”
- Central research question: *Which governance modalities are best suited to navigate divergent interests, incorporate local and traditional knowledge, and achieve local-scale biodiversity conservation implementation?*
- 4 case study locations: Colombia, Uruguay, Chile, Canada

#### ACTION-RESEARCH STAGE 4

*Effectively communicate  
research results through a  
range of activities to  
strategic stakeholders*

Results incorporated and used to inform  
conservation governance management  
actions and decisions

ONGOING (BOOK, CONFERENCES, WORKSHOPS)

#### ACTION-RESEARCH STAGE 3

*Collaboratively reflect on  
research results in and  
across cases and design  
strategies/guidelines to  
improve governance  
challenges in cases.*

Written guidelines documenting and  
systematizing barriers, enablers and  
strategies for each of the cases.

INITIATED

Improved local  
community  
well-being

Safeguarded  
Cultural  
Heritage Values

Enhanced  
biodiversity  
conservation

STRATEGIES/  
ACTIONS

OUTCOMES

GOALS

# Votación en Zoom

**¿Cuál es el propósito de desarrollar cadenas de resultados en un proyecto de investigación de TD?**

1. Participar en actividades de manera disciplinada.
2. Co-diseñar con todos los actores involucrados las actividades que lograrán los productos
3. Para guiar la evaluación cuando se completa el proyecto.
4. Todas las anteriores

**What is the purpose of developing results chains in a TD research project?**

1. To engage in activities in a disciplined way
2. To co-design with all actors involved the activities that will achieve outputs
3. To guide the assessment when the project is completed
4. All of the above

# Teams in Socioecological Research

**Which team member attributes/characteristics lead to ID and TD team research outcomes that successfully bridge the knowledge-action gap?**

## **22 ID & TD Projects**

- Ongoing and Completed
- Seed Grants, Small Grants, Collaborative Research Networks
- 17 countries

# Teams in Socioecological Research (Analysis)

Dimension	Attributes	Item example
Cognitive	Mental models, <i>learning</i>	<b>Learning:</b> I know the tools materials, resources that other team members require for conducting their work.
Conative	Incentive, <i>motivations</i>	<b>Motivation:</b> I prioritize team meetings of this project over other commitments.
Affective	Affect-based trust, <i>backup behavior</i>	<b>Backup Behavior:</b> Team work continues if a member is sick or absent.

Team Structure:  
Scenarios and  
Diagrams

**Knowledge  
application**

(  
resource  
management impact,  
SES solutions)

**Knowledge  
extension**

(  
technical meetings,  
policy briefs

# Teams in Socioecological Research (Results)

*Knowledge Extension Outcomes more likely achieved by teams that:*

- *Top-down leadership*
- *Team diversity*
- *Shared cognition (F2F, joint training)*
- *Trust (Trust, previous experience)*

*Knowledge Application Outcomes more likely achieved by teams that:*

- *Team diversity and membership diversity (two hats)*
- *Distributed leadership*
- *Shared cognition (F2F, joint training)*
- *Trust (Trust, previous experience)*

- 1) Curiosity, intellectual challenge, and friendships are important incentives for teamwork
- 1) Institutional pressure to publish overrides scientists' interest and motivation to conduct ID &TD teamwork,

# 10 Tips for a Positive TD Team Dynamic

## Trust

Trust provides the foundation for a team; positive team dynamic; successful conflict management

## Vision

Provides an anchor for the team; common foundation for achieving team goals

## Self-Awareness

Self-reflection, learning and inquiry improves quality of team interactions; helps build and nurture strong relationships

## Leadership

Collaborative leadership recognizes & facilitates strengths and capabilities of every team member

## Mentoring

Provide training and learning opportunities; Identify areas for team members to grow and succeed

## Team Dynamics

Navigate critical stages of team evolution; develop positive team dynamic; includes conflict “storming”

## Communication

Vital to team function; Requires trust, respect, and safe environment to have candid/difficult conversations & disagreements

## Share Success

Recognize and reward team members' contributions and achievements; builds a positive team dynamic

## Disagreement

Conflict can be a resource; Disagreement can expand thinking and stimulate new directions for research

## Network

Relationships are key; Collaborative teams transcend organizational boundaries; Expand knowledge mobilization

(2018). *Collaboration and Team Science Field Guide*. 2nd edn., National Institutes of Health Publication, No. 18-7660, National Cancer Institute: Bethesda, Unites States of America. Online: <https://www.cancer.gov/about-nci/organization/crs/research-initiatives/team-science-field-guide/collaboration-team-science-guide.pdf> (850KB PDF).

# Navigating Team Evolution Dynamics

## 5 Phases of Team Evolution:

1. **Forming**
  - Early stage; high excitement; polite; little disagreement; positive expectations
2. **Storming**
  - Difficult, but key stage for later team cohesion & success; plurality of knowledge systems; resistance
3. **Norming**
  - Agreement on shared purpose & goals; team cohesion improves; collective vision
4. **Performing**
  - High motivation, trust, and empathy; effective team performance; balancing interdependence and self-management
5. **Adjourning/Mourning**

# Conflict Management Strategies

- The “storming” stage is recognized as a key step in team development
  - Conflict can be productive (resource) or destructive (curse) depending on how it is managed
- Create opportunities for “learning together” as a team, understand the different epistemologies, conceptual frameworks and methodological tools that each member brings to the team
  - Methods workshops
  - Theory presentations
  - Co-create shared vision, goals, and agreed upon rules/norms
- Self reflection & group reflections to understand *plurality* within the team
  - *What are my own assumptions, beliefs, training and experience?*
  - *What are my own biases and preferences?*
  - *What theoretical or conceptual framing is appropriate for the research problem?*
  - *What tools or methods are appropriate for the research problem?*
- Do not ignore tensions, this is likely to create adversarial relationships and resentments

# Votación en Zoom

**¿Con qué estrategias de gestión de conflictos se ha comprometido en entornos de equipo? (Elija hasta 2)**

1. Aprendiendo juntos
2. Autorreflexión
3. Compartir metodologías o marcos conceptuales entre disciplinas
4. Ejercicios para generar confianza
5. Ninguna

**Which conflict management strategies have you engaged with in team settings? (Choose up to 2)**

1. Learning together
2. Self-reflection
3. Sharing methodologies or conceptual frameworks across disciplines
4. Trust-building exercises
5. None of the above

# TD Policy Analysis (Case Study Example)

## Análisis de políticas y TD

MASSEY  
UNIVERSITY

Dr. Martín García Cartagena

School of People Environment and  
Planning

Massey University

M.garcena@massey.ac.nz

Temas de hoy:

- Que es la política publica?
- Como se desarrolla la política pública?
- Análisis racional de políticas publicas
- Políticas publicas, problemas sencillos, y problemas complejos
- Modelos de desarrollo de politicas publicas y distintos roles del analista/asesor
- Ejemplo practico: Whanganui East/Proceso de construcción de una estrategia de resiliencia comunitaria
